OBSERVATION INFORMATION

Species	Date(s) Observed	Spawning	Rearing	Present	Anadromous
coho	April 24 - May 1, 2001		6		<input checked="" type="checkbox"/>
					<input type="checkbox"/>
					<input type="checkbox"/>
					<input type="checkbox"/>
					<input type="checkbox"/>

IMPORTANT: Provide all supporting documentation that this water body is important for the spawning, rearing or migration of anadromous fish, including: number of fish and life stages observed; sampling methods, sampling duration and area sampled; copies of field notes; etc. Attach a copy of a map showing location of mouth and observed upper extent of each species, as well as other information such as: specific stream reaches observed as spawning or rearing habitat; locations, types, and heights of any barriers; etc.

Comments: Location; Township 28S Range 36E Section NE 1/4 17 ; Latitude N59 degrees 29.558, Longitude W139 degrees 20.327 (NAD27). Stream is number 15 on the map.

Stream characteristics: Small trib to stream -2010. Collects water and flows through wetland/muskeg with some willow. Width .7m; depth .3 - .5m; temperature 45 degrees F. Adult fish remains present in lower reach. Organic/clay in muskeg portion with grass/Carex spp.

Stream surveys were part of the Yakutat Fish Habitat and ATV Trail Assessment project. Field crews surveyed streams for fish using baited minnow traps. Soak times for traps were usually less than 30 minutes per trap/ two traps per sample site. Captured fish were identified and released on-site. Field teams were comprised of ADF&G and Yakutat Ranger District personnel.

SealCrkQ2X2.jpg

Nope - I screwed up. It's separate. It come close to but doesn't join up on the other end. In looking at your hydro it is probably the one just to the west. Look at this re-modification jpg and see if that helps. Phil

One final question on this. #15 appears to come from and then rejoin stream

2010. Is this the case (a distributary) or is it a separate stream that heads near the 2010 channel?

<< File: SealCrkQ2X.jpg >> Ed - here's the modified jpg for this. This was is pretty tough because of the beaver dam activity throughout this upper area re-routing water every-which-way. My best guess.... Phil

Hi Phil,

Did you get a chance to look at this one yet. I couldn't find a response.

But with all these other emails flying around I wasn't sure if I missed it or something.

Phil,

Looks like a few more of these are jumping between the different hydro streams that I have. Can you look at the attached Jpeg and let me know where the stream should lie for streams 5, 9, 16, 17 and there's also something going on there with the upper section of 2010. I've overlain your original submittal with the hydro and photo in the jpeg.

Phil.

Back to this question there several others here (4 - 9, 11 - 18) that also note "adult fish remains". Are those Coho also or other?

Hi Phil.

I'm into the W. Seal Creek nominations now. Numbers 1 & 2 both mention adult remains being present. Were you able to ID which species?
